Design Document
Version 1.0
14/11/18

Diego Piccinotti, Umberto Pietroni, Loris Rossi

Table of Contents

Introduction

Purpose

The purpose of this document is to further analyze the design and architectural choices for the system to be. Whereas the RASD presented a general view of the system and its features, this document will detail those concepts by showing components of the system, its run-time behavior, deployment plan and algorithm design.

The document will therefore contain a presentation of:
- Overview of the high-level architecture
- Main components and their interfaces provided one for another
- Runtime behavior
- Design patterns
- Algorithm design of the most critical parts of the application
- Implementation plan
- Integration plan
- Testing plan

Scope

(An SDD shall identify the design stakeholders for the design subject.
An SDD shall identify the design concerns of each identified design stakeholder.
An SDD shall address each identified design concern.

Stakeholders are those people, groups, or individuals who either have the power to affect, or are affected by the endeavour you're engaged with.
)

Definitions, Acronyms, Abbreviation

Definitions

- **User**: individual who allows *Data4Help* to monitor his location and health status.
- **Third party**: individual or organization registered to *Data4Help* which can request users' data.

- **Data collection**: gathering of users' data through a wearable device.
- **Anonymized data**: data about more than 1000 users whose personal information has been previously removed so that they are not directly relatable to the system's users.
- **Elderly**: user who is subscribed to *AutomatedSOS* and is older than 60 years old.
- **Risk threshold**: Set of boundary health parameters defined for each elderly. If monitored values of the user's health parameters get below these boundaries, an SOS request is placed to an external ambulance provider.
- **Athlete**: user who participates in a run.
- **Run organizer**: third party who can manage runs for athletes.
- **Spectator**: non-registered individual who follows a run through a map with runners' positions.
- **Wearable**: a personal device provided with biometric sensors and GPS given to each user for free after the registration process.

Acronyms

- **API**: Application Programming Interface
- **DB**: Database
- **DBMS**: Database Management System
- **DD**: Design Document
- **GUI**: Graphical User Interface
- **RASD**: Requirements Analysis and Specifications Document
- **GPS**: Global Positioning System
- **GSR**: Galvanic Skin Response

Abbreviations

- **Gn**: n^{th} goal.
- **Dn**: n^{th} domain assumption.
- **Rn**: n^{th} functional requirement.
- **Rn-NF**: n^{th} nonfunctional requirement.

Document Structure

Architectural Design

Overview:

(High-level components and their interaction)

Component View

Deployment View

Runtime View

(You can use sequence diagrams to describe the way components interact to accomplish specific tasks typically related to your use cases)

Component Interfaces

Selected Architectural Styles And Patterns

(Please explain which styles/patterns you used, why, and how)

Other Design Decisions

User Interface Design
(Provide an overview on how the user interface(s) of your system will look like; if you have included this part in the RASD, you can simply refer to what you have already done, possibly, providing here some extensions if applicable.)

Requirements Traceability

(Explain how the requirements you have defined in the RASD map to the design elements that you have defined in this document.)

Implementation, Integration And Test Plan

(Identify here the order in which you plan to implement the subcomponents of your system and the order in which you plan to integrate such subcomponents and test the integration.)

Effort Spent
(In this section you will include information about the number of hours each group member has worked for this document.)
